

***Acadolenus snadjri*** Fatka & Kordule, 1981 (TH593)

*Acadolenus* → Redlichiida → Redlichiina → Ellipsocephaloidea → Ellipsocephalidae

**Provenance** : Czechia; Jince, Vinice Hill, "Baze" site

**Formation** : Jince Fm, *Sternbergaspis brdensis* Zone

**Age** : Cambrian (Wuluian)

**Details** : Complete specimen in somewhat folded (not quite enrolled) state. As you can see in the detail images, the specimen (an internal mould) suffered some minor damage (left part of the cephalon, and posterior parts of the pygidium). Sorry for the lesser quality of the images (I normally do my photography on sunlit days, profiting from counter-light...but when I made these pictures the sky was rather clouded). Scale = 5mm/square.

Note that the Ellipsocephaloidea used to be placed into the Ptychopariida (now "Order Uncertain").

**Bought on** : 22/06/2023

**Bought at** : Val2, Sainte-Marie-aux-Mines

**Event** : SmaM 2023
