

***Altiocculus harrisi*** (Robison, 1971) (TH190a)

***Altiocculus*** → Aualcopleurida → Aulacopleurina → Aulacopleuroidea → Alokistocaridae

**Provenance** : US; ?Utah

**Formation** : Wheeler Shale

**Age** : Middle-Cambrian

**Details** : Complete specimen which was erroneously sold to me as a “*Greenops boothi*” from the Devonian of Arkona, Ontario (Canada)...which was clearly a major ID mistake. However, being intrigued by trilobite identification (and because of the lithology of the piece), I immediately saw a connection to Utah trilobites...went on a little search, and was able to identify the trilo with certain accuracy (I tell you, it certainly pays off having a collection of trilobite pictures taken from the internet to consult!). Detail images were made with differing lighting angles in a (futile?) effort to bring out more surface details.

**Bought on** : 07/11/2021

**Bought at** : The Mixx, Herselt

**Event** : PaleoTime 2021
