

Trilobita indet. (TH499)

Trilobita indet. → ?Order → ?Suborder → ?Superfamily → ?Family

Provenance : Morocco, Djebel Saghro

Formation : ? Fm

Age : Cambrian(?-Ordovician boundary)

Details : On one piece with (TH497 + 497a) **cf. Hapalopleura sp.** (see there for images) and (TH498 + 498a-c) **cf. Kingaspidooides indet.** (see there...). To me, there's really not enough surface details to make a reliable ID, but anyone with a better eye can comment via trilobitehouse@yahoo.com.

Gotten on : 27-28/11/2021

Gotten at : Namur Expo, Namur

Event : Namineral 2021
