

Brachiaspidion microps Robison, ? (TH480)

Brachiaspidion → (Order Uncertain = ex-Ptychopariida) → Kingstonidae

Provenance : US; Utah, Millard County

Formation : Wheeler Shale Fm

Age : Middle Cambrian

Details : Not-quite-well(completely)-prepped complete specimen. Seems weird to me that the specimen was not prepped as well as it should be (left side not completely freed from matrix, as well as parts around the median thorax). I suppose I'll have to try my hand at it myself some day.
