

“*Acadoparadoxides* sp.” (TH131)

Acadoparadoxides → Redlichiida → Redlichiina → Paradoxidoidea → Paradoxidae

Provenance : Morocco; “Alnif area” (more probably from Djebel Ougnat)

Formation : Jbel Wawrmast Fm

Age : Lower Middle Cambrian

Details : I'm quite sure I got a wrongful identification here, but I haven't really researched the possibility of what genus and species this specimen might belong to. Any help to bring me to a more positive identification is highly appreciated.
