

Sinespinaspis markhami Edgecombe & Sherwin, 2001 (TH281)

Sinespinaspis → Odontopleurida → Odontopleurina → Odontopleuroidea → Odontopleuridae

Provenance : Australia; New South Wales, Forbes, Cotton Hill Quarry

Formation : Cotton Beds Fm

Age : Lower Silurian

Details : External imprint of complete specimen, bought as *Sinespinaspis* sp., but clearly a *S. markhami*. My very first trilobite representative from "Down Under", aka the "Land of Oz"! Most of the thoracic spines are not in the imprint, but wow anyway! Pictured below with different lighting angles, getting that optical illusion of "positive" image.

Bought on : 04-05/11/2017

Bought at : Palais des Congrès, Liège

Event : Interminéral 2017
