

Megistaspis (Ekeraspis) sp. (TH545)

Megistaspis → Asaphida → Asaphina → Asaphoidea → Asaphidae → Megistaspidinae

Provenance : Morocco; Jbel Kissane

Formation : ? Fm

Age : Middle/Upper Ordovician

Details : Being from the Jbel Kissane, the vendor (a renowned Ordovician specialist) considered this to be a younger species than the usual ***M. (Ekeraspis)*** found in the Fezouata; he also felt it has a shorter median spine on the pygidium (but I think that cannot be considered here, as it wasn't completely present in the considerably big nodule the fossil came out of).
