

Kingaspidoides angustigena Geyer, 2022 (TH297 + 297a-c)

Kingaspidoides → Redlichiida → Redlichiina → Ellipsocephaloidea → Ellipsocephalidae

Provenance : Morocco; ?Djebel Ougnat

Formation : ?Jbel Wawrmast Fm

Age : Early Middle Cambrian

Details : This piece (sporting two completes and two near-completes missing the pygidium) was wrapped in a bit of mystery, having no identification card what-so-ever. Also, I had apparently forgotten to register its purchase, so I do not even know when (probably 2017) or where I bought it (although the whom from is limited to two sources). However, from the typical lithology I was able to ascertain that it must come from the Early Middle Cambrian Jbel Wawrmast Formation of the Moroccan Djebel Ougnat, and a chance revisiting of a paper on Ellipsocephalidae by Pedersen, Geyer et al. (2022) convinced me of its identity.

Bought on : ?/?/2017
