

***Protolenus* sp.** (TH318a)

Protolenus → Redlichiida → Redlichiina → Ellipsocephaloidea → Ellipsocephalidae → Protoleninae

Provenance : Morocco; Djebel Ougate

Formation : ?Jbel Wawrmast Fm

Age : Early Middle Cambrian

Details : An interesting piece, even if the actual trilobite concerned isn't quite complete (see photograph left below)...for after studying it, it turns out the additional cranidium is not of the same species (occipital ring more clearly visible, as well as the first "glabellar lobe" – seen as from the occipital ring, that is)
