

Chlustinia keyserlingi (Barrande, 1846 as *Odontopleura*) (TH594)

Chlustinia → Odontopleurida → Odontopleurina → Odontopleuroidea
→ Odontopleuridae → Odontopleurinae

Provenance : Czechia; Zahorany

Formation : Zahorany Fm

Age : Upper Ordovician (Sandbian)

Details : Partial cephalothorax (moult) from old collection. Of course we all dream of having complete specimens in the collection. In some cases however, only disarticulated pieces of exoskeleton are found...and even if that is not the case with Czech specimens of this species (even less so with specimens from Morocco), once in a while one must content one's self when being able to simple add a species to the collection, thanks to an incomplete (hard enough to find these guys anyway, you know!). Scale = 5mm/square
