

Andalusiana sp. (TH174 + 174a-b)

Andalusiana → Redlichiida → Olenellina → Olenelloidea → Holmiidae → Holmiinae

Provenance : Morocco; Jbel Wawrmast (Agdz vicinity)

Formation : Jbel Wawrmast Fm

Age : Lower Cambrian

Details : A triplet of trilobites on one piece. I doubt this was a composite...and if it IS one after all, it's very well done! Note : from Djebel Ougnat, Geyer described **Cambropallas telesto**, previously called "Andalusiana".

Bought on : 06/12/2015

Bought at : Harelbeke, CC Het Spoor

Event : Lithos 2015
