

TRILOBITOMORPH ARTHROPOD (C10)

Provenance : Morocco, "Zagora area", Ouaoufraoute site

Formation : Fezouata Shales Fm

Age : Lower Ordovician (Upper Tremadocian – Lower Floian)

Details : A piece about which was first asked my "expertise", and which was eventually given to me as a present with the purchase of some trilobites. One can't make out a lot in the first detail image (not as when looking at the piece with a magnifying glass anyway), which was taken in dry conditions. The second image, taken after wetting the stone, reveals a lot more... Addition to the collection thanks to Mbarek Moujane.

Gotten on : 23/03/2022

Gotten at : Alnif area, Morocco

Event : Purchase of trilobites
