

Harpes cf. macrocephalus Goldfuss 1839 (TH621)

Harpes → Harpetida → Harpetina → Harpetioidea → Harpetidae

Provenance : Belgium, "Couvin region"

Formation : Jemelle Fm (most probably Vieux Moulin Mbr)

Age : Middle Devonian (Eifelian)

Details : Rather badly prepped specimen of a cephalon (admittedly, I happen to know that a lot of Belgian trilos are a true nightmare to prep – and I have no idea, yet, of trilobite prepping conditions from the site this came from). Detail images first of left lateral side, then (next page) of frontal view. Again, sorry for the lousy quality of the images (I normally do my photography on sunlit days, taking advantage of the favorable counter-light...but that particular of making the pictures, day the sky was literally overcast by clouds). The original description of the species is from Germany...which is why I personally changed the ID given by the finder into one containing that "cf.". Addition to the collection thanks to Benedikt Magrean.
