

***Daguinaspis* sp.** (TH230)

Daguinaspis → Redlichiida → Olenellina → Fallotaspidoidea → Fallotaspididae → Daguinaspidinae

Provenance : Morocco; Tazemmourte

Formation : ? Fm

Age : Lower Cambrian

Details : Got this little specimen from a good friend whom is rather specialized in Ordovician trilobites. This one he'd found himself, and had not been able to identify. Having left the identification aside myself, I gave it a temporary numbering of its own. However, also on the piece is a somewhat bigger cephalon which is clearly recognizable as ***Daguinaspis* sp.** (see bottom image), and working on the pictures for this file suddenly put things in their proper place. I am nevertheless (for practical reasons) keeping the original numbering for this specimen.
