

Odontopleura ovata Emrich, 1839 (TH375 + 375a-e)

Odontopleura → Odontopleurida → Odontopleurina → Odontopleuroidea → Odontopleuridae → Odontopleurinae

Provenance : Poland; Holy Cross Mountains, vicinity of Bardo

Formation : ? Fm

Age : Silurian

Details : Incomplete imprints on 6 pieces. So...why does one occasionally spend money on incomplete trilobite material? First of all, complete stuff of some trilobites is occasionally rarely found (which rises the prices ☺), and secondly...from several bits one can quite regularly make a complete picture of the animal's exoskeleton. Detail photography of the 6 pieces in the picture above happened from left to right, as positioned in the box. No idea how I came to forget making a "general" picture of the 6th stone...must be because the external imprint turned out to be the most complete? Sorry for the bad quality of the images (made the pictures on a cloudy day).
